

COVID-19 Advisory

To: Willow Valley Communities Residents
From: Dennis W. Griest, President and CFO
Date: July 8, 2020
Subject: Positive COVID-19 Resident at Spring Run

A Resident at Spring Run has tested positive for COVID-19. Prior to the COVID-19 diagnosis, the Resident was transferred to Lancaster General Hospital/Penn Medicine for an unrelated medical concern. There, a COVID-19 test was subsequently conducted in preparation for a procedure and the positive test result was returned. The Resident has been at the hospital for the last 8 days.

Willow Valley Communities is following protocols for contact with appropriate government agencies. Upon learning of the Resident's positive test results, Willow Valley Communities initiated its contact tracing protocols to identify any known person (Residents and/or Team Members) with whom the affected Resident may have had direct close contact in our communities within a specified period. That tracing process determined that no persons, Residents or Team Members, had direct close contact with the COVID-19 positive Resident.

Willow Valley Communities has been taking proactive measures to protect Residents and Team Members since first knowledge of COVID-19. The community has been adhering to, and in many cases exceeding, the recommended control measures and guidelines of the PA DOH, CDC, and Centers for Medicare & Medicaid Services. Control measures are continuously updated as new information becomes available.
